Lighting**

## CORPORATE PROFILE

Northern Lighting is based in Richmond, British Columbia (BC). The company is set up in a 4500 square feet warehouse facility which houses our head office space for management and administration staff as well as inventory for receiving and distribution and a showroom. Our company has a branch office in Toronto ON and we provide Commercial & Industrial LED solutions from coast to coast.

Northern Lighting focuses on helping STRATA councils reduce their energy consumption as well as maintenance by providing only the best quality LED lighting that meets the CSA, cUL, ETL, Energy Star & DLC standards.

Canada Green Building Council  
Every Building Greener

### Why Choose Us?

Northern Lighting has received many awards and certification including the Green Building Certification, ensuring we meet the ASHRAE and the (LEED) Green Building standards with our high quality and high efficiency LED lighting products.

We supply only high quality, energy efficient products with the best warranty and product life span. In fact, Northern Lighting was the first to offer LED lighting solutions with a 5 year on site warranty in Canada.

City of  
Richmond

**WORK SAFE BC**

Given the current demand for LED installation in commercial facilities in the Lower Mainland and across BC and across Canada, the warehouse has the capacity to hold container loads of LED light fixtures including high bays, panels, street lights as well as T8 tubes (4 & 8 feet), Corn bulbs, Projectors, Floods and many others. Orders are booked in advance with enough lead time to ensure all components are available. Orders are delivered to each work site for our team of electricians to install same day.

Northern Lighting is focused on Commercial and Industrial clients and makes best efforts to implement a best practices policy, to ensure timely delivery and installation prior to final commissioning of the lighting systems. The company's operations are focused on quality merchandizing as well as customer relations, training, quality issues, product development and the promotion and sale of its innovative LED technologies.

We perform random tests and analysis to ensure that the output is of the required quality for all LED lights. Plus we provide extensive training and cooperation with our sales personnel, electricians and installers to ensure our quality standards are always a prominent aspect of the company's services.
